Standard: *Build Directive*	
Issue Date: **May 5, 2000**	Standard ID: *S-CM-070*
Supersedes: **February 28, 2000**	Rev/Change 2.0

1. **Purpose:** To describe the creation of a new software library baseline.

2. **Creating Procedures:**
   P-PE-050 Develop Products

3. **Contents:**
   a) *Project ID:* the unique identifier of the project
   b) *Date:* date of build directive
   c) *Created by:* person generating the build directive
   d) *Approved By*: required signature for approval
   e) *Build Environment:* this section describes the environment in which the build is to be conducted. Identify the system hardware and software required to successfully conduct the build. All hardware and software should be identified sufficiently to distinguish it from similar environments.
   f) *Build Inputs:* this section identifies the inputs to the build. This includes any existing baseline as well as any changes to be included. Identify the authorization for changes being included. (MR numbers, etc.)
   g) *Build Procedure:* this section provides the script for the build. All steps should be detailed and indicate the inputs, the software being used in the step and any outputs from the step.
   h) *Build Outputs:* this section identifies the outputs created by the build. It should include data set names, tape numbers and other information required to distinguish this baseline from previous baselines.

4. **Format**
   Project Manager Specified

5. **Notes:** N/A
